## Construction Services

### Site Modification and Integration

CROSSLAYER Construction Services facilitates commercial and telecommunication construction projects with specific expertise in Wireless Communication Sites and related network operations.

Our experienced professionals ensure quality, safety and dedication to wireless operators during deployment and system upgrades.

#### *We set our self apart from the rest...*

We exceed our customer's expectations where others simply fail. By working closely with our clients our Dedicated Service Delivery group assures we meet and exceed our customer's expectations. We "Self Perform" most of our work and only work with qualified sub contractors to guarantee quality while the rest continue to fail and disappoint.

Our construction staff is guided by our client's goals and objectives allowing us to assimilate within our client's culture which we effectively communicate to our subcontractors and team members. CROSSLAYER provides the highest quality of service to help you meet today's challenges and stay within budget while constantly meeting aggressive timelines.

All CROSSLAYER projects are managed through the BLUEZONE system providing clients with timely closeout packages, up to the minute project status and 24x7 web access to project photos, reports and documents.
